

Minimise Your Risk With Comprehensive Testing & PinPoint Accuracy

About

NexIAST is an award-winning SaaS Interactive Application Security Testing (IAST) solution, automatically scanning and identifying security vulnerabilities in your applications and web services, with pinpoint accuracy.

In addition to finding known vulnerabilities, NexIAST also calls upon our unrivalled and proprietary knowledge base of Oday vulnerabilities previously detected by NeuraLegion's AIAST® technology, delivering the most comprehensive IAST solution on the market.

With NO false positives, NexIAST is a scalable and enterprise ready solution, providing full integration and automation

of your application testing into your SDLC, delivering immediate operational and cost savings, allowing for faster development and release.

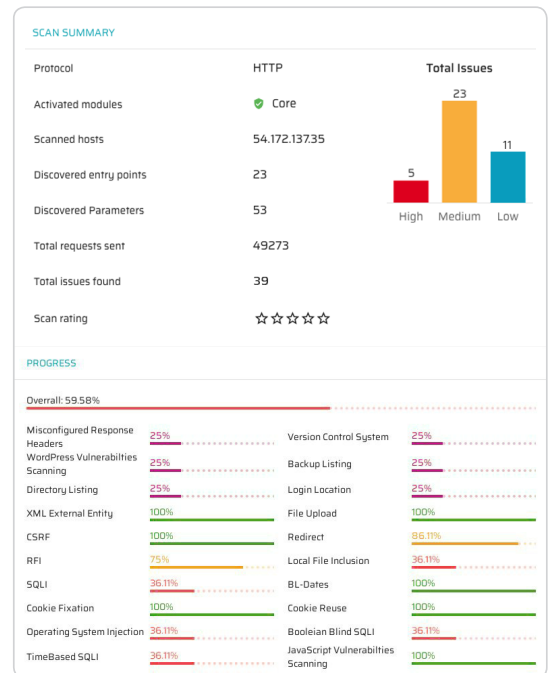

NexIAST is the world's first pure IAST solution, achieving full active IAST capabilities, such as code-instrumentation and system specific health telemetry, without the need to use a patchwork of different solutions and technologies.

Test any target such as Web Applications, APIs, Mobile Applications and Microservices-based Applications, with our out of the box solution.

Automate & Scale with Security Testing at the Speed of DevOps

Benefits

- Artificial Intelligence engine mimics a hacker, replacing the need for manual testing
- The only scanner that can detect your Odays and business logic flaws
- Achieve DevSecOps with automated vulnerability detection throughout your SDLC and QA
- Detect and remediate at the speed of DevOps
- Release secure applications faster with immediate real time reports and remediation guidelines
- Slash your costs with Automated Application Penetration Testing
- Test everything from Dynamic Web Apps, APIs, Mobile Apps, Microservices-based Apps and Protocols.

A New Generation of Application Security Testing

Key Features

► Easy to Use

NexIAST is a cloud based platform, utilising an agent that requires minimal integration. Using NexIAST requires no costly training or complex configuration by experienced security staff. Simply Log-in ► Upload ► Scan! Empower even your junior QA or developers to produce high quality results, immediately!

► NO False Positives

Due to its active nature, AIAST® is a completely False Positive FREE technology. Only validated, exploitable vulnerabilities are reported, eliminating the need to recheck and filter every scan report. Find and fix your vulnerabilities faster and cheaper.

► Immediate Reports & Code instrumentation

Scan results are available in real-time via the dashboard or as a downloadable report, providing you with full remediation guidelines, as well as pinpointing the exact location in the faulty code with our instrumentation capabilities. Save time and money as you fix your weaknesses and

improve your cyber security posture. In addition, easily validate remediated vulnerabilities with a click of a button to produce updated reports, without the need to rescan!

► Comprehensive and superior testing

Our award winning AIAST® technology, provides you with the most comprehensive AST automation on the market, able to detect the OWASP Top 10, MITRE Top 25 and Oday vulnerabilities. Comprehensive testing automation, on par with a team of human ethical hackers, at your fingertips!

► Unprecedented Coverage

The AIAST® technology delivers the ONLY automated solutions on the market capable of fully testing Dynamic Web Apps, APIs, Mobile and Microservices-based Apps. Start using Application Security Testing solutions that are RELEVANT for today's technologies!

► SDLC, CI/CD Integration

Maintain compliance with NexIAST compliance-oriented test and reports, supporting Application Security Testing for ISO27001, PCI DSS, HIPAA, NIST 800 Series and other relevant standards and regulations.

Integrate Security Into Your SDLC

Don't Settle For Less, Get The Only Pure IAST Solution!

NexIAST has been specifically developed from the ground up, to offer the only, single-product IAST solution on the market, which is not a patchwork of legacy tools brought together.

Combining industry leading vulnerability detection with code instrumentation, NexIAST allows you to test more applications faster, whilst focussing on remediation efforts with false positive free compliance reports, integrating security testing assurance throughout your software development workflows.

TESTIMONIAL BY SOGO SERVICES

"At Sogo, we develop solutions for enterprises, which are used by thousands of end users and are strictly monitored by the customer, for quality and security. Using NexPloit allows a quicker release cycle of products that we build since NexPloit detects security vulnerabilities as part of our SDLC so scans, which are performed by customer's security team before release do not reveal new issues."

Gil Messerman - CTO, Sogo Services
