

# NexPloit CLIENT CASE STUDY

## With NexPloit **SOGO Services** Improves Software Security by Fixing Vulnerabilities Other Solutions Could Not Find

### Company Name

Sogo Services

### Industry

Technology

### Size

15 Employees

### Product(s)

Business Process Automation Engine

### Location

Tel Aviv, Israel

### Company Overview

Sogo Services provides customers design and software development services in areas related to Computer Vision, AI, Security and any solutions that require high performance and scalability.

### SUMMARY

Sogo Services developed a consumer-facing solution for a global Telco service provider with very strict SDLC policies and processes. During the development the product underwent continuous security scanning, both automated and manual. Using NexPloit, we were able to find issues that were either not found by customer's scanners or find them ahead of new version deployment. In addition, it allowed us reduce the time spent on fixing the raised issues due to the lack of false positives.

### THE SOLUTION

- NexPloit helped Sogo deliver more secure solutions and differentiate itself better from competitors, by the aspect of developing a more secure software
- The integration and onboarding was quite easy, as for scans, we were able to use our existing data, which was recorded as part of our regular manual QA testing.

**WHAT DID YOU LIKE BEST ABOUT NEXPLOIT?**

“In addition to the fact that it found new vulnerabilities in the product, it had an easy onboarding and lack false positives in the findings”

**Gil, CTO**

**HOW EASY WAS THE DEPLOYMENT?**

“As we use cloud based testing environments and Nexplot is cloud based, the onboarding was very easy”

**Gil, CTO**

**HOW EASY WAS THE USAGE?**

“The system is very easy to use. All that we needed was to record the traffic our manual and automated QA testing generated, and were able to start the scans directly from that”

**Gil, CTO**

**HOW USEFUL DID YOU FIND THE REPORTS?**

“Reports were informative and helpful in quickly reproducing and addressing the found problem”

**Gil, CTO**

**HAVE YOU FOUND ANY FALSE-POSITIVES IN THE REPORT?**

“There were none”

**Gil, CTO**

**DID YOU TRY OTHER SOLUTIONS BEFORE CHOOSING NEXPLOIT?**

“Our customer was continuously using additional DAST and SAST tools as part of their standard software product SDLC, therefore we had reports from both Nexplot and other solutions on ongoing basis”

**Gil, CTO**
